

kaleidescape™

Dear Kaleidescape Customer,

This week, your Kaleidescape™ System will be automatically upgraded to the latest Kaleidescape software, Release 3.0. This new update contains a range of enhancements, the most significant of which is our new Music Server software.

Our new Music Server software delivers the same engaging and entertaining experience you've come to expect from Kaleidescape. With it, your Kaleidescape System will be able to automatically catalog each album in your collection and provide eye-popping cover art, an expert review, genre and other information. You'll also be able to mix and match music tracks to create your own albums. And your fully-configured Kaleidescape System will hold as many as 10,000 music CDs.

Other improvements in Release 3.0 include: the ability to override movie information using the Kaleidescape Web Utility; the ability to share specific favorite movie scene bookmarks with other Kaleidescape Systems; new Java™-enabled control panels; and various performance enhancements enabling the Kaleidescape System to handle even larger DVD and CD collections.

Like all upgrades to your Kaleidescape System, these new capabilities – excluding Music Server software – will be immediately available to you once the update is complete. To activate Music Server software, which is free to customers who purchased Kaleidescape Systems prior to March 13, 2006, simply contact your Kaleidescape dealer.

Updated product information is available at www.kaleidescape.com.

We hope you enjoy these new software enhancements.

Sincerely,

The Kaleidescape Team
