

Dear Kaleidescape Customer,

Kaleidescape is pleased to announce release 3.3 of the Kaleidescape Entertainment Appliance Operating System (KEAOS). KEAOS 3.3 includes several enhancements:

- **Easier Mix Album creation**
Create and edit Mix Albums directly using your OSD. The OSD interface now allows you to perform all the Mix Album editing functions that previously required the Web Utility.
- **Music artist portraits added**
Enjoy portraits of the music artist in addition to the album cover art. View artist portraits in Music Collections, various Details pages, and the Now Playing page.
- **Replace music album cover art without losing data**
Replace the music album cover art with an image without having to re-enter any existing album information.
- **Enhanced classical music interface on the OSD (beta test only)**
Preview enhancements to the classical music interface coming in a future release of KEAOS. Two music collections were added to the OSD: *Classical Composers* and *Classical Works*. Two new details pages were also added: *Classical Work* and *Classical Performance*. To experience the classical music interface, type 18121812 using your touch panel or remote control. Send your comments on these new classical music features to beta@kaleidescape.com.
- **Storage system reliability**
Many improvements in KEAOS 3.3 increase the reliability of your Kaleidescape System. Also, when your System encounters a severe problem with a Disk Cartridge, you will receive an onscreen notice and you will be unable to import a DVD or CD until the Disk Cartridge problem has been corrected.

Sincerely,

The Kaleidescape Team
